Two of my favorite mods. If you have ever played Minecraft on PC, you probably know there are mods on the Internet that add a whole bunch of new ways for players to play the game. In my opinion, one of the best mods that any Minecraft player should download is Bedrock Edition or Bedrock Server . This mod adds an entire new world for players to play in (in Bedrock Edition). The creators of this mod did something pretty huge by bringing something different to Minecraft. Most of the time when people play Minecraft PC, they are playing on a server that has only ONE map. This is called "vanilla Minecraft." When you play on a server like this, your characters have to be transported to the location where your server is located. It's kind of boring because all your friends are far away from your character and its frustrating when you want to progress in the game but you can't because your friends are not at that location, but with Bedrock Edition, you can have a whole new experience playing Minecraft. You don't need to be at special locations (like the spawn point) in order to play your favorite modded game on Bedrock Server.",

Minecraft Creative is the new version of Minecraft, previously released on desktop platforms. This version of the game has been developed with the users in mind, allowing you to build whatever your imagination can come up with. You can choose between playing on multiplayer servers dedicated to building and survival or play against other players in multiplayer creative mode.",

Some features that are currently not included in the game but are planned for future iterations include a fully dynamic weather system as well as the ability for players to tame animals and ride them.",

What is a Minecraft Server List? – A Minecraft Server list is a list of servers that you can use to connect to. In order to use one, all you need to do is type in the IP address or host name and then choose one from the list that appears. If you are using a Bukkit or Tekkit server, then there will be some connection issues that need to be sorted out before connecting directly through the IP address or host name. For more information about this, please refer to our article on how to connect to your minecraft server here.",

How to Download and Install Minecraft Update 1.0 STEP 1 Download the Minecraft update 1.0 files here (for Mac). STEP 2 Download the Minecraft update 1.0 worlds generator here (optional). STEP 3 Download a Winrar alternative called 7zip and use it to extract the downloaded file.. STEP 4 Locate the download folder and copy over the contents of it into your Minecraft game folder located at

C:\Users\YOUR_USERNAME_HERE\AppData\Roaming\.minecraft\. STEP 5 Restart your computer. Your Minecraft update 1.0 world should now be ready to play! To confirm, in the game settings, you should see the 'New world' button that reads "1.0". If you don't see this button, then something has not gone right - make sure you install the Minecraft worlds generator before trying again! Enjoy!",

You must be careful about what items go into your inventory because once it goes into your inventory, it cannot go back out unless you die and respawn at a new random spawn point. Another type of server is a Creative Server. This type of server focuses around the idea of you being able to build anything that your imagination can think of. You don't have to be creative in game; it's similar to Minecraft, but it allows you to be a lot more creative with the blocks and items in the game. There are many different types of servers where you can connect; if you feel like there isn't enough, another way you could connect is by using a private server. A private server is highly customizable and allows even more freedom than a public minecraft server because there are no other people connected to the world at the same time as you. You can make the server with your friends and do anything that you can do on a public minecraft server, but with more freedom",

What is a Minecraft Server Address? – A Minecraft Server address is another name for a IP address. It is the combination of numbers and letters that are given to you by your internet provider. This will only be needed if you are using an individual server and want to connect directly through the IP address by typing it into your internet browser or from the host name of the server. For more information about this, please refer to our article on how to connect to your minecraft server here.",
